B

1. Option (ii)

2. Option (iv)

3. (a) p = proportion among all HIV tests giving false-positive

   (b) H_0: $p = 0.02$ vs. H_a: $p < 0.02$

4. (a) point estimate $\hat{p} = \frac{22}{92} = 0.2391$

   95% CI: $0.2391 \pm 2(0.0457)$, or $(0.1477, 0.3305)$

   (b) qnorm(0.99)

5. (a) Type II

   (b) increase
