B

1. (b) probability = Area = $(1)\left(\frac{1}{4}\right) = 0.25$

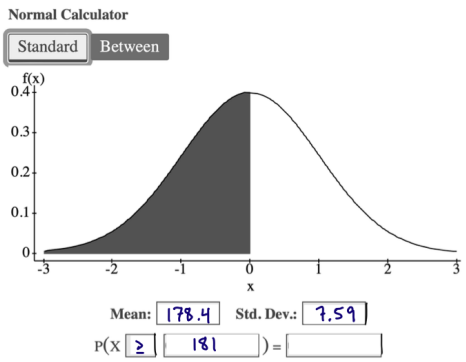

2. (a) appliances sold

   (b) Whether the appliance is black or not

   (c) $H_0: p = 0.1$ vs. $H_a: p < 0.1$

3. (a) II (b) IV (c) I (d) III

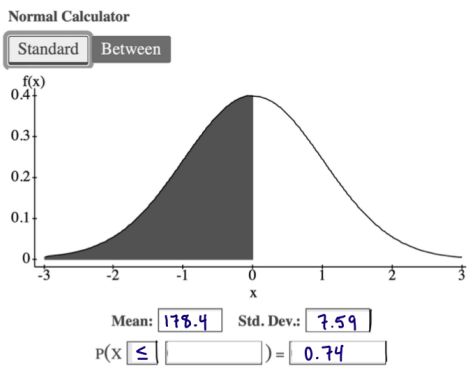

4. (a)

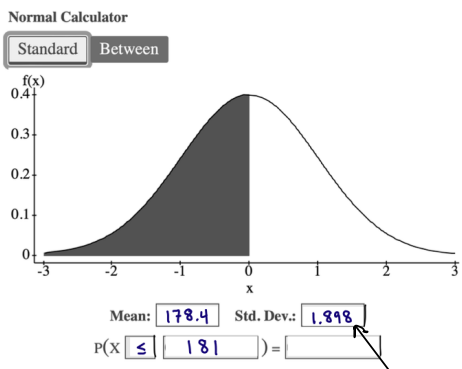

(b)

(c)

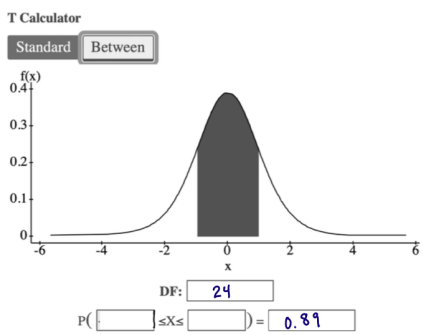

(d)

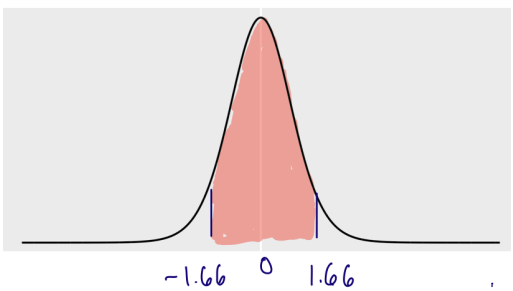

$\sigma = 7.59$ and so $SE_{\bar{x}} = \frac{7.59}{\sqrt{16}} = 1.8975$

6. (a) μ is the average weight of these oranges considering the entire population.

(b)

(c)

(d) $123.4 \pm (1.65964)\frac{7.6}{\sqrt{25}} = 123.4 \pm (1.65964)(1.52) = 123.4 \pm 2.52265$

or $(120.88, 125.92)$

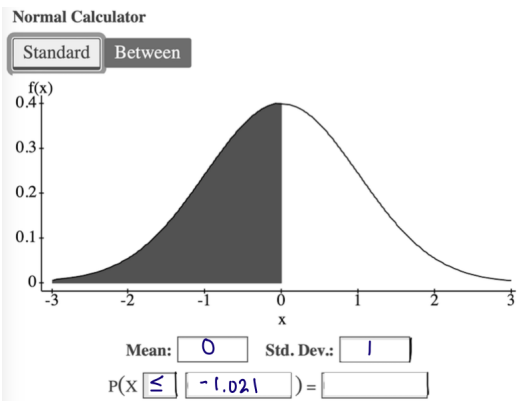

(e) Option (iii)

7. (a) $\hat{p} = \frac{43}{96} \doteq 0.44792$

(b) It is valid, since $np = (96)(0.5) = 48$ and $n(1-p) = (96)(0.5) = 48$. Both are at least 5.

(c) $Z = \frac{\hat{p} - p}{SE\,\hat{p}} = \frac{0.4479 - 0.5}{\sqrt{(0.5)^2/96}} = \frac{-0.0521}{0.05103} \doteq -1.021$

(d)

(e) Since the p-value is larger than $\alpha = 0.05$, we fail to reject the null hypothesis. Our data is consistent with the possibility that half of city residents support having no restrictions.
