

A

1. Option (c)

2. (a) Bimodal, symmetric

(b) nearly the same as

(c) around 15

3. Arranged from smallest to largest:

118 126 127 129 131 133 139 139 142 143

There are 10 numbers, here, so the median is the average of the 5th and 6th ones:

$$\frac{1}{2}(131 + 133) = \underline{132}$$
