

B

1. Option (b)
2. (a) unimodal(?), negatively skewed
(b) smaller
(c) around 6

3. Arranged from smallest to largest:

132 137 139 140 141 142 146 147 154 154

There are 10 numbers, here, so the median is the average of the 5th and 6th ones:

$$\frac{1}{2}(141 + 142) = \underline{141.5}$$
