B

1. (b) and (c) are possible bootstrap samples.
   (a) is not containing 185 (not in the original sample).

2. (a) $SE_{\bar{x}} \approx 20$
   (b) $\mu \approx 85$
   (c) decrease

3. $\hat{p} \pm 2(SE_{\hat{p}}) = 0.28 \pm (2)(0.035)$, or $(0.21, 0.35)$

4. (ii)
